

## THICK FILM EPOXY INTUMESCENT

Epoxy Fireprotection is a flexible two-pack Intumescent applied to a specified thickness, dependent on the steelwork size and the required fire rating. It provides full protection for periods up to H120 and J120 on structural steel members, including decks and bulkheads.

It's tough surface withstands impact and when exposed to temperatures in excess of 180°C, it will swell to form a protective char. In its passive state it will not crack and is resistant to atmospheric and chemical attack. Excellent bonding between substrate primers and the fireprotection material provides a complete system to combat corrosion problems.

**BARRIER LIMITED ARE APPROVED APPLICATORS OF:**

**CHARTEK, W&J LEIGH'S M90, PITCHAR, THERMOLAG, FENDOLITE**

**FIREPROTECTION MATERIALS**
